

# ProControl™

## MODEL: PV3P12032A0

### TYPICAL PERFORMANCE

# Humphrey®

#### CONNECTIONS

Pneumatic	10-32 UNF ports
Electrical	18" Lead Wires (red)
Mounting	#6-32 x 0.25" Dp (2x)

#### FEATURES

- Each ProControl™ Valve is tested for unactuated seat leakage not to exceed 2ccm at rated pressure (Port 1 > Port 2).
- Typical hysteresis is 8% or less and measured from ascension and descension of current at a given flow point.
- Control flow with direct current to 200mA or with PWM. For best results, we recommend PWM of 5k Hz or greater.
- When testing and evaluating proportional valves, consider the Humphrey Valve Driver, model PCD. PCD accepts a 4-20mA, 0-5VDC or 0-10VDC signal and drives the proportional valve accordingly.
- PV3P12032A0 may be calibrated to specific customer parameters in some applications. Contact an application specialist for details (below).
- For additional assistance in understanding, selecting and using proportional control valves, contact a Humphrey application specialist at:

Graph depicts typical performance of Humphrey Proportional Valve Model PV3P12032A0 using a stabilized upstream pressure of 100 PSI, filtered air, at Port 1 and amperage of 0-200mA. Performance is repeatable for millions of cycles. If pressure or current exceed maximum recommended values, performance may be compromised.

Calibrated with stabilized upstream pressure of 100 PSI to a flow of 30 SLPM @ 200mA.

PV3P12032A0 will have precision control but less flow when upstream pressure is lower than 100 PSI. Typical curves with stabilized upstream pressures of 25, 50 and 75 PSI are shown.
